Career Roadmap

TODAY'S SESSION

Four moves that get you hired

Goal: leave today recruiter-ready — with a sharper resume, a stronger profile, and a plan.

01

Resume & GitHub

Make your projects and impact impossible to miss.

02

LinkedIn

Turn your profile into a recruiter magnet.

03

Interviews

Practice the four interview types you'll face.

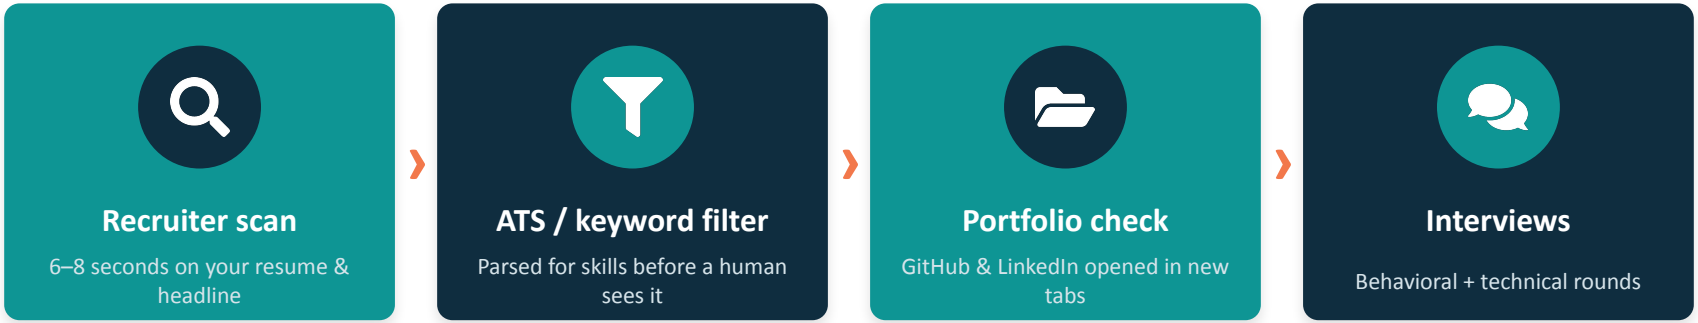

04

Career Roadmap

Map the role, the skills, and your next 90 days.

WHY THIS MATTERS

How AI candidates actually get screened

The takeaway: you are filtered at every step before anyone talks to you. Each pillar today removes one filter.

PILLAR 1

Resume & GitHub

Make your projects and measurable impact impossible to miss.

01

RESUME & GITHUB

Anatomy of a strong AI engineer resume

Projects over coursework

Lead with what you built and shipped, not classes taken.

Quantified impact

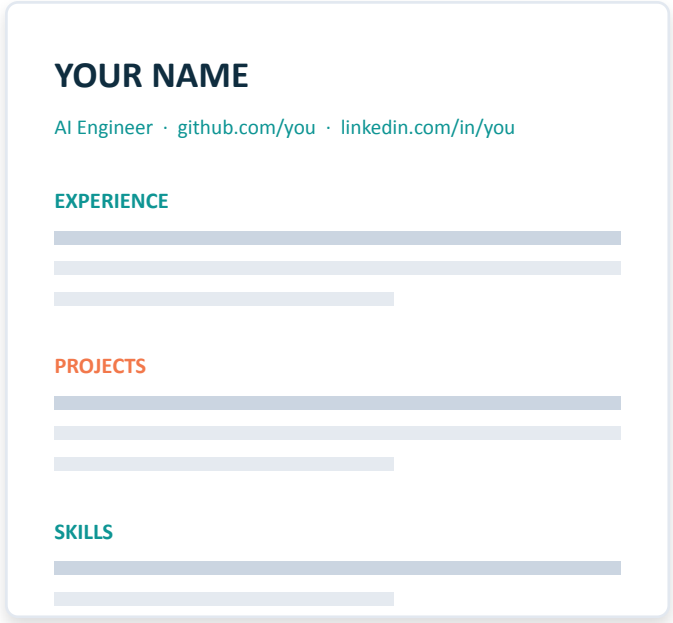

Every bullet shows a number, scale, or outcome.

Organized skills

Group: languages · ML frameworks · MLOps · cloud.

One clean page

Single column, standard headers, no graphics that break ATS.

RESUME & GITHUB

Quantify everything

Same project — one bullet gets skimmed past, the other gets you the interview.

✕ BEFORE

Built a machine learning model to predict customer churn using Python.

✓ AFTER

Built a churn-prediction model (XGBoost) that improved recall **18%** on **500K** records, flagging $1.2M of at-risk revenue.

The formula for a strong bullet

Action verb + **What + how** + **Metric** + **Outcome**

Built, shipped, optimized + model / tool + technique + %, scale, $, latency + the business result

RESUME & GITHUB

Your GitHub is your real portfolio

Pin your best 3–6 repos

Recruiters look at pinned repos first — curate, don't dump.

READMEs that sell

Problem → approach → results → demo link/screenshot.

Meaningful commits

Clear history; delete empty or abandoned repos.

Live demos win

Deploy something — a Space, an app, an API endpoint.

PILLAR 2

LinkedIn Optimization

Turn a static profile into a searchable recruiter magnet.

02

LINKEDIN

Four sections recruiters actually read

Headline

Go beyond your title: "AI Engineer | LLMs · RAG · MLOps | Building production ML". Keywords here drive search.

About

A short first-person narrative: what you build, your stack, what you're looking for. Front-load keywords.

Featured

Pin your best repo, a live demo, or a write-up. Make your proof one click away.

Activity & Network

Post about projects, engage with the field, set "Open to Work," and connect with intent.

PILLAR 3

Interviews

Practice the four interview types before they count.

03

INTERVIEWS

The four interviews you'll face

Behavioral

"Tell me about a time…" — teamwork, conflict, ownership.

Coding / DSA

Live problem-solving; arrays, strings, complexity.

ML Fundamentals

Bias/variance, metrics, model choice, data issues.

ML System Design

"Design a recommender" — data, model, serving, monitoring.

INTERVIEWS

Answer with structure: STAR + a question bank

S — **Situation**

Set the context briefly.

T — **Task**

What was your responsibility?

A — **Action**

What you specifically did.

R — **Result**

The outcome — with a number.

ML fundamentals — expect these

- Explain bias vs. variance & overfitting
- When precision vs. recall vs. F1?
- How do you handle imbalanced data?
- Pick a model for this problem — why?
- How would you debug a model that won't learn?

PILLAR 4

Career Roadmap

Map the role, the skills, and your next 90 days.

04

CAREER ROADMAP

Know the roles — and the ladder

ML / AI Engineer

Builds & ships models into products. Common first target.

Applied Scientist

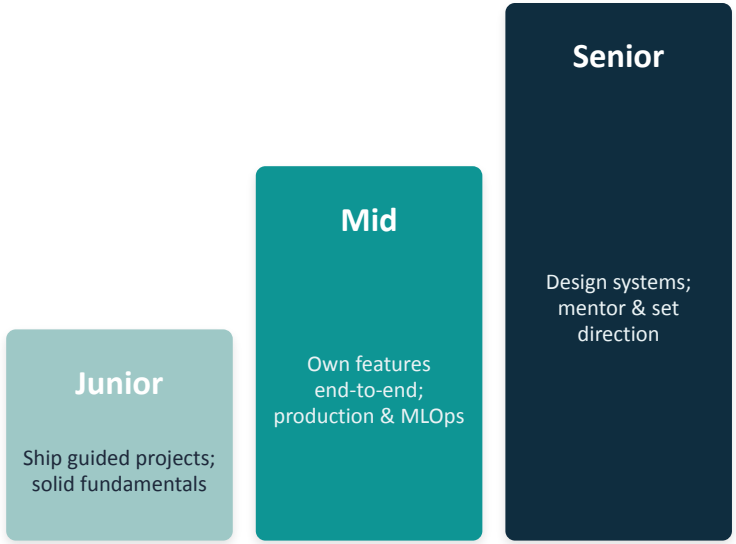

Research-leaning; often wants an advanced degree.

MLOps Engineer

Pipelines, deployment, monitoring, infra.

Data Scientist

Analysis, experimentation, insight.

CAREER ROADMAP

Your next 90 days

A concrete plan beats motivation. Fill this in before you leave.

30 DAYS

Fix the basics

- Rewrite resume bullets with metrics
- Pin & polish 3 GitHub repos
- Rewrite LinkedIn headline + About

60 DAYS

Build & apply

- Ship one new portfolio project
- Apply 5–10 targeted roles / week
- Start tracking applications

90 DAYS

Convert

- Do weekly mock interviews
- Pursue referrals over cold applies
- Iterate from interview feedback

This week's action list

- Rewrite 3 resume bullets with real metrics
- Pin your best 3 repos & polish their READMEs
- Update your LinkedIn headline + About
- Book one mock interview with a peer
- Draft your 30-day plan and start it today

You've done the hard part — now go make it visible.

Q&A

Templates, rubrics & checklists in the shared drive.
